IronNet Customer Program: No-cost, no-obligation upgrade to Stamus Security Platform (SSP)

On September 29, 2023, IronNet - a publicly traded company developing and marketing network detection and response solutions - filed an 8-K with the US Securities and Exchange Commission (SEC) indicating it has ceased operations.

For a limited time, Stamus Networks is offering all IronNet customers a no-cost, no-obligation transition to Stamus Security Platform (SSP).

SUMMARY OF SOLUTION

Stamus Networks will help transition your security operations from IronNet to the Stamus Security Platform (SSP) and provide you with a license to SSP at no charge for the remainder of your current IronNet license period.

Stamus Networks will prepare and onboard your organization just like all our customers, and we will support you just like our paying customers. In addition, we will work with you to transition your existing threat intelligence and Suricata rules onto the Stamus Security Platform.

And there will be absolutely no obligation to renew with Stamus Networks at the end of that period.

What's the catch?

Actually, there is none. On October 6, 2023, the Stamus Networks board of directors authorized the company to provide this solution to IronNet customers who have been left without a supported network security solution.

While we are confident that you will find Stamus Security Platform to be a powerful addition to your security operations, you are under no obligation to renew after this no cost period.

WHAT IS INCLUDED

Stamus Security Platform at the premium "Stamus NDR" license tier, including:

- **Stamus Network Probe™** – software that inspects and analyzes all network traffic using deep packet inspection (DPI) to perform real-time threat detection, enriches the resulting events with extensive metadata, and captures network protocol transactions, flow data, extracted files, and packets (PCAPs). May be deployed in private cloud, public cloud, on-premise, or hybrid environments. This program includes licenses for an unlimited number of probes.
- **Stamus Central Server™** – software provides the centralized management of the probes, third party threat intelligence and rulesets, consolidated event storage and a central integration point. It includes an additional layer of machine learning and algorithmic threat detection, along with automated event triage – enabled by tagging and classification. Finally, the Stamus Central Server provides a powerful threat hunting and incident investigation user interface. May be deployed in private cloud, public cloud, on-premise, or hybrid environments.
- Subscription to Stamus Labs threat intel, threat detection feeds, and rulesets, updated daily
- Subscription to Proofpoint ETPro Suricata ruleset
- Integration of your existing threat intelligence feeds and custom Suricata rules
- Complete access to open APIs and response-trigger integrations (via Webhooks)
- Complete onboarding and integration support
- Up to 16 hours of administrator and analyst onboarding training
- Custom detection development training
- Regular skill development training
- Ongoing support 8 a.m. – 5 p.m. in your local time Monday through Friday

Note: for monitoring 40 Gbps and greater network connections, Stamus Network Probes must be deployed on Stamus Appliances at an additional cost.

ABOUT STAMUS NETWORKS

Stamus Networks believes in a world where defenders are heroes, and a future where those they protect remain safe. As defenders face an onslaught of threats from well-funded adversaries, we relentlessly pursue solutions that make the defender's job easier and more impactful. A global provider of high-performance network-based threat detection and response systems, Stamus Networks helps enterprise security teams accelerate their response to critical threats with solutions that uncover serious and imminent risk from network activity. Our advanced network detection and response (NDR) solutions expose threats to critical assets and empower rapid response.
